

SDI engine with a wide and universally usable range of performance and torque. Direct injection via electronically controlled distribution injection pump (Marine Diesel Control). Extremely refined engine with favourable weight performance ratio.

The SDI 75-5 convinces not only with high torque, in excess of 150 Nm from 1.750 to 3.000 rpm, but also with its environmentally friendly characteristics such as low fuel consumption and low emissions.

Easily meets EU standards and all expected future emission standards for marine engines.
